Section-1: What we were supposed to do

1. Explore on autofill on current time – Anitha
2. Implementation of navigation bar in App – Avinash
3. Add change pin into settings, user should be able to change pin only when correct pin entered is correct. - Madhu
4. Create History Activity – Kartik

Section-2: What we did

1. Added autofill on current time – Anitha
2. Implemented Navigation bar in App – Avinash
3. Working on settings preference to add settings and to achieve the functionality of change pin – Madhu
4. Create History Activity - Kartik

Challenges faced:

1. To understand how to use settings preference.

Section-3: What we will do

1. Add filters based on category, time, range of money, Payment type - Kartik
2. Add delete option on app bar in detail activity, prompt for confirmation of deletion – Madhu
3. Numerical keypad for Amount – Anitha
4. Add category selection in settings and while adding new category show list of icons which can be selected as icons for new category – Anitha
5. Amount can't be empty, show a tool tip if amount is empty while saving details – Avinash

Section-4: Meeting with the TA/Client

1. Recurring transaction should happen automatically at given time? - No need to notify, it should directly get added in Database.
2. Income has payment options, category…Is it required? - Yes, income can be of any type and custom category can be used in income.
3. Full History will be shown every time you go to the history page, filter won't be saved…ok? - It can either show full history or it can be empty list until filter is added
